

Block 2- Week 8

[Original Canvas Link](#)

Pre-Learning

Kuracloud activity - prelearning

Lectures/Webinars

Medical Science- Renal Medicine- Epidemiology of acute kidney injury

Medical Science- Renal Medicine- Common complications in chronic kidney disease

Medical Science- Physiology- Pressure changes and airflow during breathing including work of breathing

Medical Science- Assessment of Pulmonary Function II

Medical Science- Assessment of Pulmonary Function I

Medical Science- Renal Medicine- Epidemiology of chronic kidney disease

Medical Science- Pathology: Pathology of Non-Neoplastic Lung Disease Part 1 (Acute)

Medical Science- Cardiology- Introduction to management of heart failure

Medical Science- Pharmacology- Pharmacological strategies used to manage MI/angina/heart failure

Clinical Skills - Evidence-based Medicine (EBM) 3: Diagnostic Testing

Clinical Skills - Exfoliative Cytology

Clinical Skills - The Well Child

Tutorials

Clinical Skills - Evidence-based Medicine (EBM) 3: Diagnostic Testing

Clinical Skills - The Well Child

Population Health- Consolidated Tutorial-
Student sheet (.docx download)

Professionalism and Leadership- Medical Ethics, Public Health and the work of the AMA

Practicals

Medical Science- Practical- Structure of the respiratory system

Post-Learning

Kuracloud activity - Post session quiz

Team Based Learning

Medical Science- TBL 2.4- Chronic Kidney Disease

Medical Science- Renal Medicine- Epidemiology of acute kidney injury

[Original Canvas Link](#)

Learning Objectives

Define Acute Kidney Injury (AKI)

Epidemiology of AKI

RIFLE

Epidemiology of AKI in developing and Developed countries

Changing trends of AKI in community, hospital inpatients and ICU

AKI on Chronic Kidney Disease

AKI and age

Resources

Lecture:
lecture slides

Recording

Any additional resources e.g. in class quiz, handouts etc.

Navigation back to:

Medical Science- Renal Medicine- Common complications in chronic kidney disease

[Original Canvas Link](#)

Learning Objectives

GFR and eGFR

Sodium: relationship of Volume to Hypertension

Anticipated Potassium derangements

Anticipated Calcium Phosphate derangements

Anaemia management

Basic Medical Management and associations of CaOx, CaPhos and Urate Renal Calculi)

Treatment complications

Resources

Lecture:
lecture slides

Recording

Any additional resources e.g. in class quiz, handouts etc.

Navigation back to:

Medical Science- Physiology- Pressure changes and airflow during breathing including work of breathing

[Original Canvas Link](#)

Learning Objectives

Outline how flows, volumes & pressures are measured;

Illustrate the phases of the respiratory cycle and what determines them;

Define forced volumes and peak flows;

Recognise some important features in a flow-volume loop; and

Explain the

P

-

V

work during respiration

Resources

Lecture:

lecture slides

Recording

Any additional resources e.g. in class quiz, handouts etc.

Navigation back to:

Medical Science- Assessment of Pulmonary Function II

[Original Canvas Link](#)

Learning Objectives

Gas transfer provides additional clinical information about the function of the lung parenchyma and pulmonary capillaries

6 Minute walk tests assess the functional status of the patient with refer to quality of life

Cardiopulmonary Exercise Tests help to identify abnormality with either pulmonary and cardiac systems

Interpretation strategy for Spirometry, Static Lung Volumes and Gas Transfer

Use of serial measurements to describe trends in disease

Resources

Lecture:

lecture slides

Recording

Any additional resources e.g. in class quiz, handouts etc.

Navigation back to:

Medical Science- Assessment of Pulmonary Function I

[Original Canvas Link](#)

Learning Objectives

The role of predicted values and have appreciation on their limitation and controversies

The clinical utility of these tests are only good as the quality

Gain confidence in the interpretation of spirometry in particular the use of FVC, FEV1 & FEV1 /FVC

Recognising different ventilatory defects with disease based on spirometry and static lung volume measurements

Shape of the flow volume curve has importance and adds diagnostic utility

Maximal inspiratory & expiratory pressures can be a useful tool in certain diseases

Resources

Lecture:

lecture slides

Recording

Any additional resources e.g. in class quiz, handouts etc.

Navigation back to:

Medical Science- Renal Medicine- Epidemiology of chronic kidney disease

[Original Canvas Link](#)

Learning Objectives

Define the terms chronic kidney disease (CKD) and end-stage renal disease (ESRD);

Name the incidences for CKD and ESRD;

Discuss the implications of diabetes mellitus, hypertension, proteinuria and haematuria on low glomerular filtration rate; and

Name some treatments available, specifically in regard to diabetic nephropathy, polycystic kidney disease and glomerulonephritis.

Resources

Lecture:
lecture slides

Recording

Any additional resources e.g. in class quiz, handouts etc.

Navigation back to:

Medical Science- Pathology: Pathology of Non-Neoplastic Lung Disease Part 1 (Acute)

[Original Canvas Link](#)

Learning Objectives

discuss and identify anatomy and histology of normal lung building on prior knowledge;

explain the pathogenesis and classification of pneumonia;

describe and identify pathology of bacterial pneumonia;

discuss in general terms other types of pneumonia; and

discuss and identify complications of bacterial pneumonia.

Resources

Lecture:

lecture slides

Recording

Any additional resources e.g. in class quiz, handouts etc.

Navigation back to:

Medical Science- Cardiology: Introduction to management of heart failure

[Original Canvas Link](#)

Learning Objectives

Provide an accurate definition of chronic heart failure

List at least four clinical risk factors for CHF

Describe a range of therapies to reduce CHF including the relevant inclusion criteria

Describe at least three non-pharmacological management approaches of CHF

Describe the differences in management of heart failure, depending on whether ejection fraction is preserved or reduced ejection fraction

Describe at least 3 first-line agents for the pharmacological therapy for symptomatic heart failure with reduced ejection fraction

Resources

Lecture:
lecture slides

Recording

Any additional resources e.g. in class quiz, handouts etc.

Navigation back to:

Medical Science- Pharmacology- Pharmacological strategies used to manage MI/angina/heart failure

[Original Canvas Link](#)

Learning Objectives

Describe a range of therapies to manage patients with stable coronary artery disease

Describe the mechanisms of action of oral antiplatelet therapies

Describe the approach to early management of patients with acute coronary syndromes, including ST-elevation acute coronary syndromes

Describe the long term management of patients post-discharge after an acute coronary syndrome

Resources

Lecture:

lecture slides

Recording

Any additional resources e.g. in class quiz, handouts etc.

Navigation back to:

Clinical Skills - EBM 3: Diagnostic Testing

[Original Canvas Link](#)

Fixed Resource Session

Learning Objectives

To appreciate why investigations are performed and how their utility is determined.

To review the concepts of sensitivity, specificity, positive predictive value, negative predictive value

To explore our understanding of these principles through the presentation of clinical data

Resources

FRS Slides

Tutorial

Learning Objectives

To understand why investigations are performed and how their utility is determined.

To review the concepts of sensitivity, specificity, positive predictive value, negative predictive value

To extend the students? understanding of these principles through the presentation of clinical data

Resources

KuraCloud

(Available to students during the tutorial)

KuraCloud Answers

(Available to students after the tutorial)

Session Guide

Journal Article

(Pre-reading)

Clinical Skills - Exfoliative Cytology

[Original Canvas Link](#)

Fixed Resource Session

Learning Objectives

Understand the definition of cytology

Discuss different methods of cytology

Understand and describe advantages and disadvantages of cytology

Discuss role of diagnostic cytology with some examples

What is the role of pathologist in cytology

Resources

FRS Slides

Clinical Skills - The Well Child

[Original Canvas Link](#)

Fixed Resource Session

Learning Objectives

xxx

xxx

xxx

Resources

FRS Slides

Tutorial

Learning Objectives

To be able to effectively interview a child/parent/guardian unit.

To be able to make a child feel comfortable in an interview setting.

To be able to address a child directly and know the importance of referring to a child by name.

To be able to observe and discuss the relationship between a parent and his/her child.

To be able to recognise and gather important additional aspects of a paediatric history.

Resources

Session Guide

Key Step Guide

RCH - Growth Charts

Professionalism and Leadership-Medical Ethics, Public Health and the work of the AMA

Learning Objectives

TBA

Resources

Lecture:
lecture slides

Recording

Any additional resources e.g. in class quiz, handouts etc.

Navigation back to:

Medical Science- Practical- Structure of the respiratory system

[Original Canvas Link](#)

Learning Objectives

Describe the structure of the nasal cavity and drainage of paranasal sinuses

?

Describe the structure of the pharynx, its division and muscles

?

Name and identify parts of the larynx, its cartilages and muscles;

?

Summarise the trachea, bronchi, bronchial tree;

?

Summarise the anatomy of the lungs and the concept of bronchopulmonary segments;

?

Compare the different parts and attachments of the diaphragm, including major structures that pass through the diaphragm

?

Compare the visceral and parietal pleura, and

?

Discuss

the blood supply, lymphatic drainage and nerve supply to the lungs

?

Resources

Aims, Outlines

Student Handout

Recording

Any additional resources e.g. in class quiz, handouts etc.

Navigation back to:

Medical Science- TBL 2.4- Chronic Kidney Disease

[Original Canvas Link](#)

Learning Objectives

At the end of this TBL module students will be able to:

Brainstorm an intervention to assist patients with CKD better manage their disease

Utilise knowledge of social determinants of health in doing so

Additional learning objectives for TBL module 2.4:

Utilise investigations to monitor stage and progression of CKD

Recognise the presentation of common complications in CKD

Link basic management principles in CKD with intent to slow progression or development of complications

Utilise understanding of basic principles of pharmacokinetics, drug dosing and monitoring and nephrotoxicity to safely manage common medications in CKD

Resources

Session Guide

Recording

Any additional resources e.g. in class quiz, handouts etc.
